

Modifying the KAV endpoint UI

All of the graphics for the UI as displayed on the endpoint are available in

`.\Kaseya\WebPages\ManagedFiles\VSAHiddenFiles\kav\KAVSkin\images`

and can be modified on the KServer for updated deployment. Already deployed endpoints can be updated to a modified UI by running a “Verify” installation from the KAV module on the KServer.

One of the more common files to update is the `title_kav.png`, which contains the text “Kaseya Antivirus Powered By Kaspersky” that shows in the upper left corner of the primary UI window.

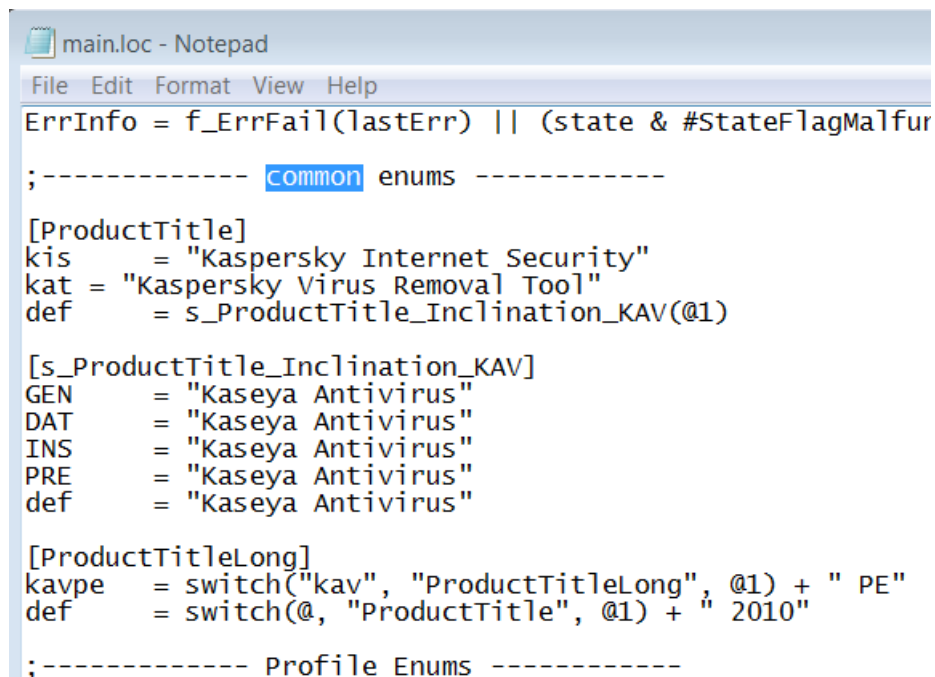

The image shows the logo for Kaseya Antivirus, which includes the text "Kaseya Antivirus" in a large, light blue font, and "Powered By Kaspersky" in a smaller, dark blue font below it.

To remove references to “Kaseya Antivirus” in the UI Window Title, Task Tray, etc., open

`.\Kaseya\WebPages\ManagedFiles\VSAHiddenFiles\kav\KAVSkin\loc\en\main.loc`

and search for the “common enums”, replace “Kaseya Antivirus” with your choice of titles.

```
main.loc - Notepad
File Edit Format View Help
ErrInfo = f_ErrFail(lastErr) || (state & #StateFlagMalfur
;----- common enums -----
[ProductTitle]
kis = "Kaspersky Internet Security"
kat = "Kaspersky Virus Removal Tool"
def = s_ProductTitle_Inclination_KAV(@1)
[s_ProductTitle_Inclination_KAV]
GEN = "Kaseya Antivirus"
DAT = "Kaseya Antivirus"
INS = "Kaseya Antivirus"
PRE = "Kaseya Antivirus"
def = "Kaseya Antivirus"
[ProductTitleLong]
kavpe = switch("kav", "ProductTitleLong", @1) + " PE"
def = switch(@, "ProductTitle", @1) + " 2010"
;----- Profile Enums -----
```

The Task Tray Icons are stored in

`.\kaseya\WebPages\ManagedFiles\VSAHiddenFiles\kav\KAVSkin\images\tray`
